Inline styles and code

Some words are **bold**, others are *italic*, and the rest are plain.

A code sample follows; its indentation must survive:

```
def factorial(n):
    if n < 2:
        return 1
    return n * factorial(n - 1)
```

This filler paragraph checks that long paragraphs are rebuilt as a single line, with no arbitrary breaks and no duplicated spaces between words, across several lines of justified or ragged text in a single-column layout.
